

Notice of Study Commencement Krosno Creek Diversion Study Class Environmental Assessment

The City of Pickering is undertaking the Krosno Creek Diversion Study to determine the best means of reducing the risk of flooding along Krosno Creek. The Study Area is shown in the Key Map below. The study will evaluate a range of alternatives for reducing flood risk, including a diversion structure to send flood flows from Krosno Creek to Pine Creek, and will include preliminary design of the recommended works.

The study is being conducted in accordance with the Schedule C process as outlined in the Municipal Engineers Association Municipal Class Environmental Assessment (October 2000, as amended in 2007 and 2011).

This Notice of Study Commencement is being issued to notify the public of the project and invite comment. To further facilitate public input, two Public Information Centres (PICs) are proposed as part of the study. The notices of the PICs will be published in the Pickering News Advertiser and will also be available on the City's website.

Should you have any questions or comments, require further information, or wish to be added to the study mailing list, please contact one of the following Study Team members:
